Aerating of turf areas, grassland and fields-is becoming increasingly vital, to overcome the hardpan caused by vehicle and human traffic-which otherwise inhibits healthy growth, moisture penetration and fertiliser uptake.

HOWARD's solution, i.e. fast-rotating slitting blades producing clean verti-cuts to a depth of 15cm with 12cm distance between the

slits - is one of the most effective methods available.

Puddles are efficiently drained and the slits will remain functional for a long time, without visual scars. Full width rear roller with dual function of depth control setting and turf restoration, leaving minimum surface disturbance.
